Revelar Rainscreen

*Revelar displayed
as a Genwall®
assembly component

*Revelar displayed on
5/8" plywood with air
& water barrier

The Revelar system is a rear-ventilated rainscreen wall system with open joints, exposed decorative fasteners, and ease of installation that results in a clean and economical Euro-look using ACM (aluminum composite material) or plate aluminum.

The open joint feature means superior protection is achieved with no need for sealants. The system can be installed on Genwall® Enhanced Substrate System™ or metal/wood studs, plywood, concrete, precast, or gypsum sheathing (with an improved vapor permeable air barrier, i.e., VaproShield®-Fassade S.) This system allows for versatile design, including stacked, running bond, or random patterns.

Air movement behind the system minimizes excess vapor. The Revelar metal panel system is an exterior or interior product that has a clean European design.
